How can I [ digitize  
comply  
measure  
supercharge  
verify  
scale  
automate  
integrate ] my decarbonization efforts?

By combining advanced machine learning and sustainability expertise, Faradai provides data management and intelligence tools to help large companies to decarbonise their business operations and supply chains.

# NET-ZERO INTELLIGENCE PLATFORM

Supercharge your decarbonization efforts.

One platform.

Comprehensive management.

Carbon Accounting

ESG Reporting

Compliance Management

Energy Analytics

Decarbonization Management

# AI-Powered Net-Zero Intelligence Platform

Gather & obtain AI-powered clarity from real time energy & sustainability data across your portfolio & supply chain

## CAPTURE

Efficient,  
granular, verified  
& accurate

## ANALYSE

Advanced AI  
analysis

## REPORT

Connected &  
accessible &  
Compliant

## REDUCE

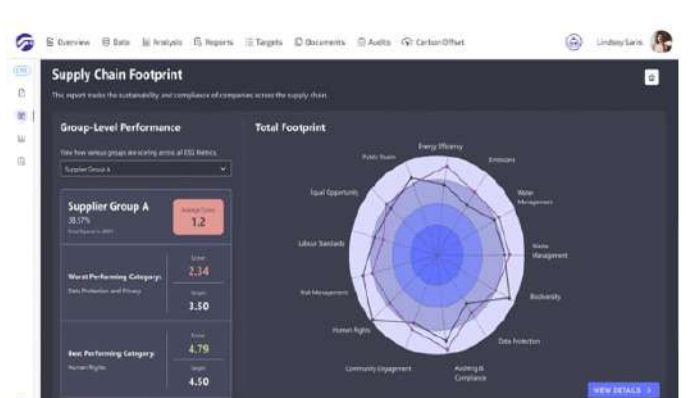

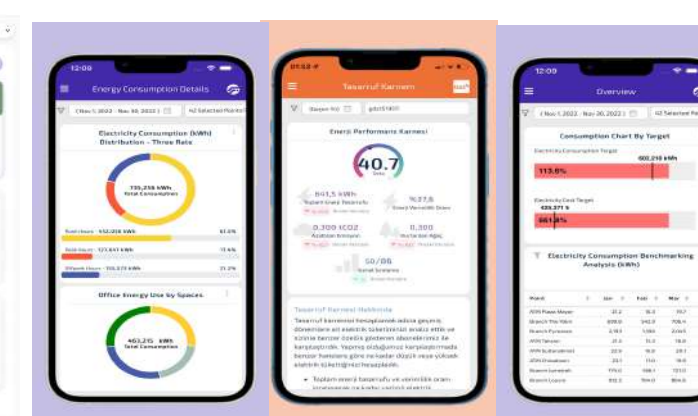

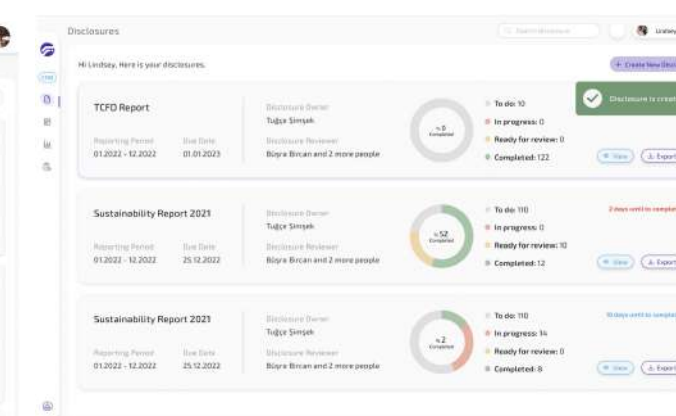

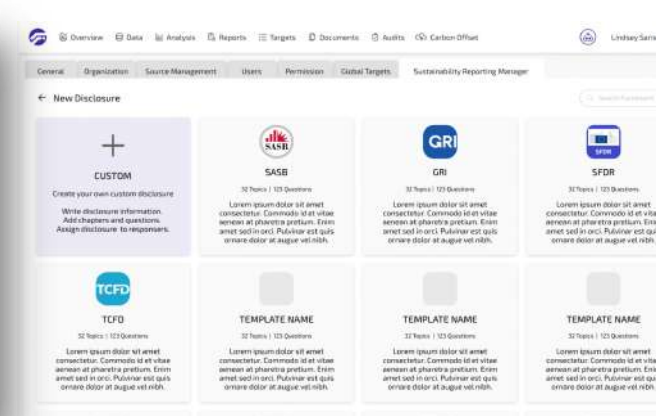

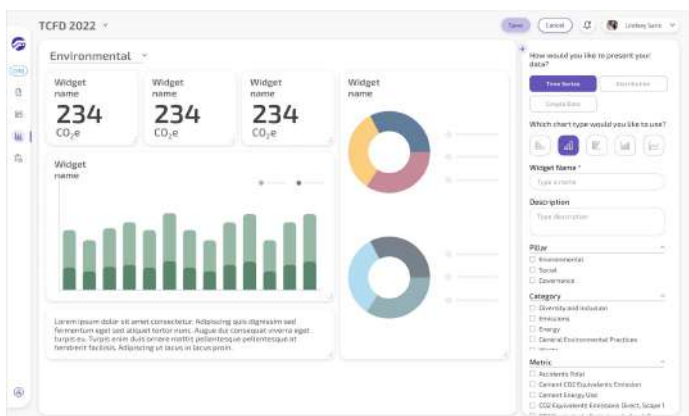

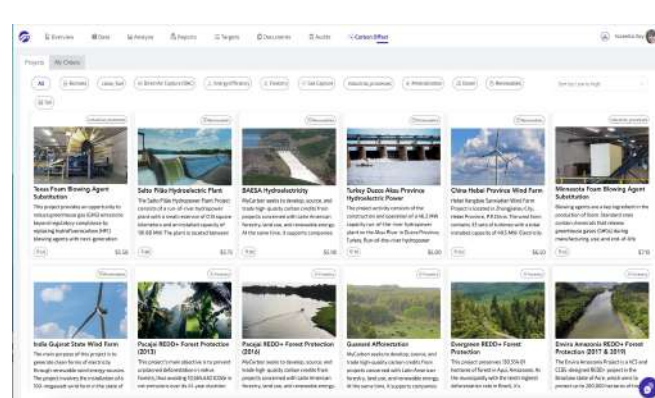

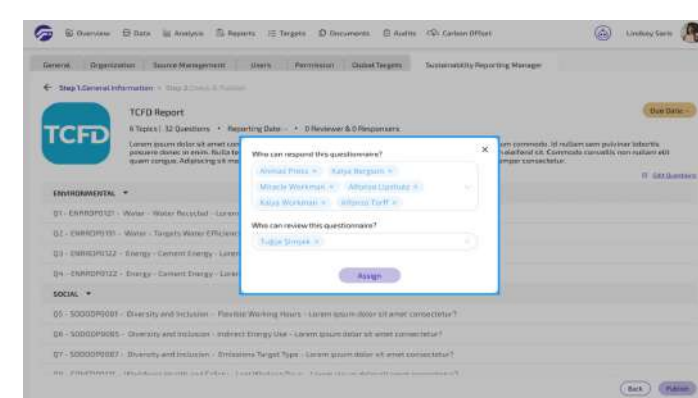

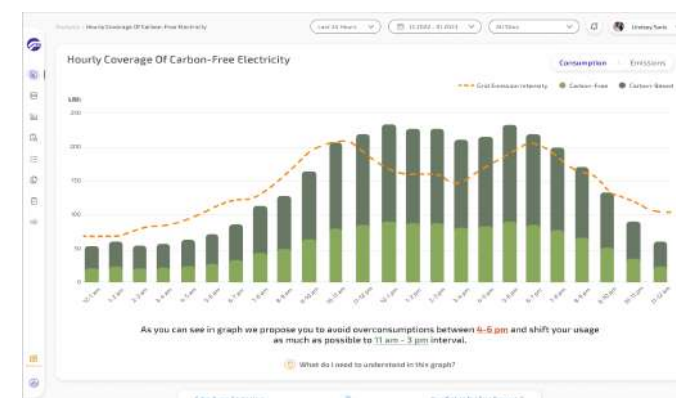

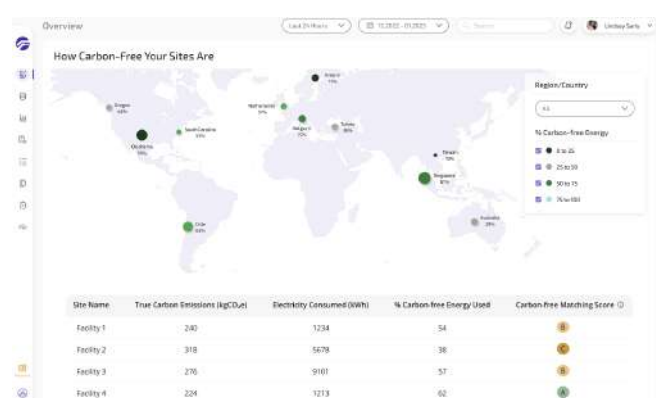

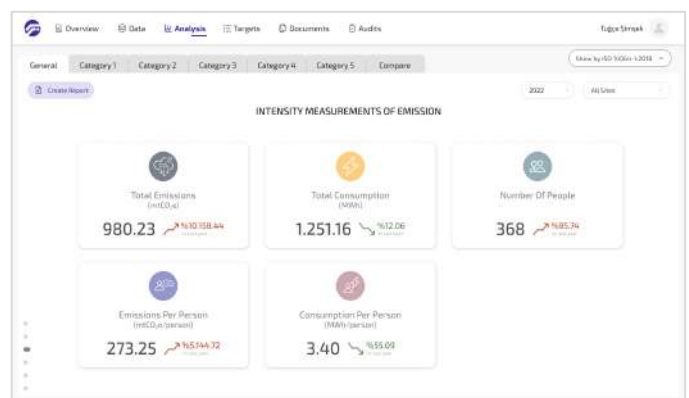

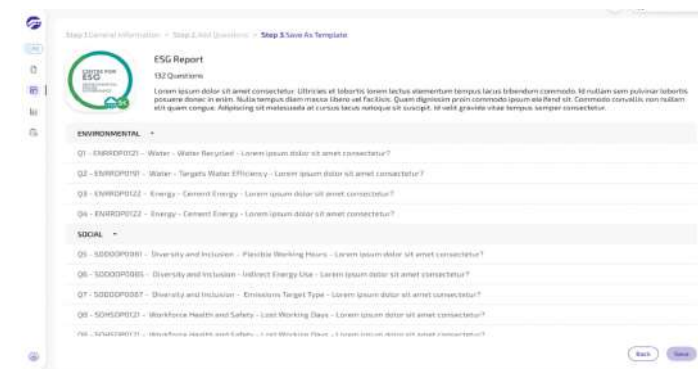

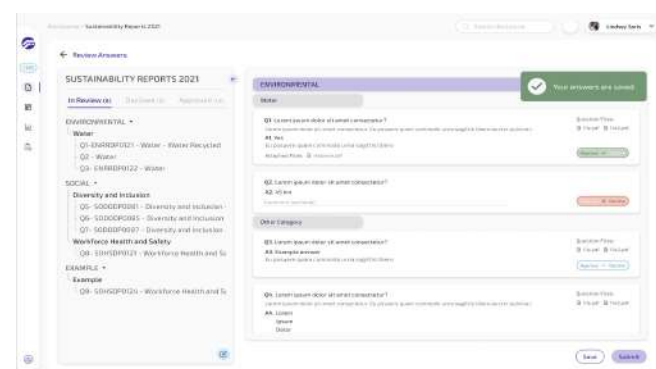

Insights & actions  
deliver savings

## VERIFY

Auto - verification  
of carbon reductions

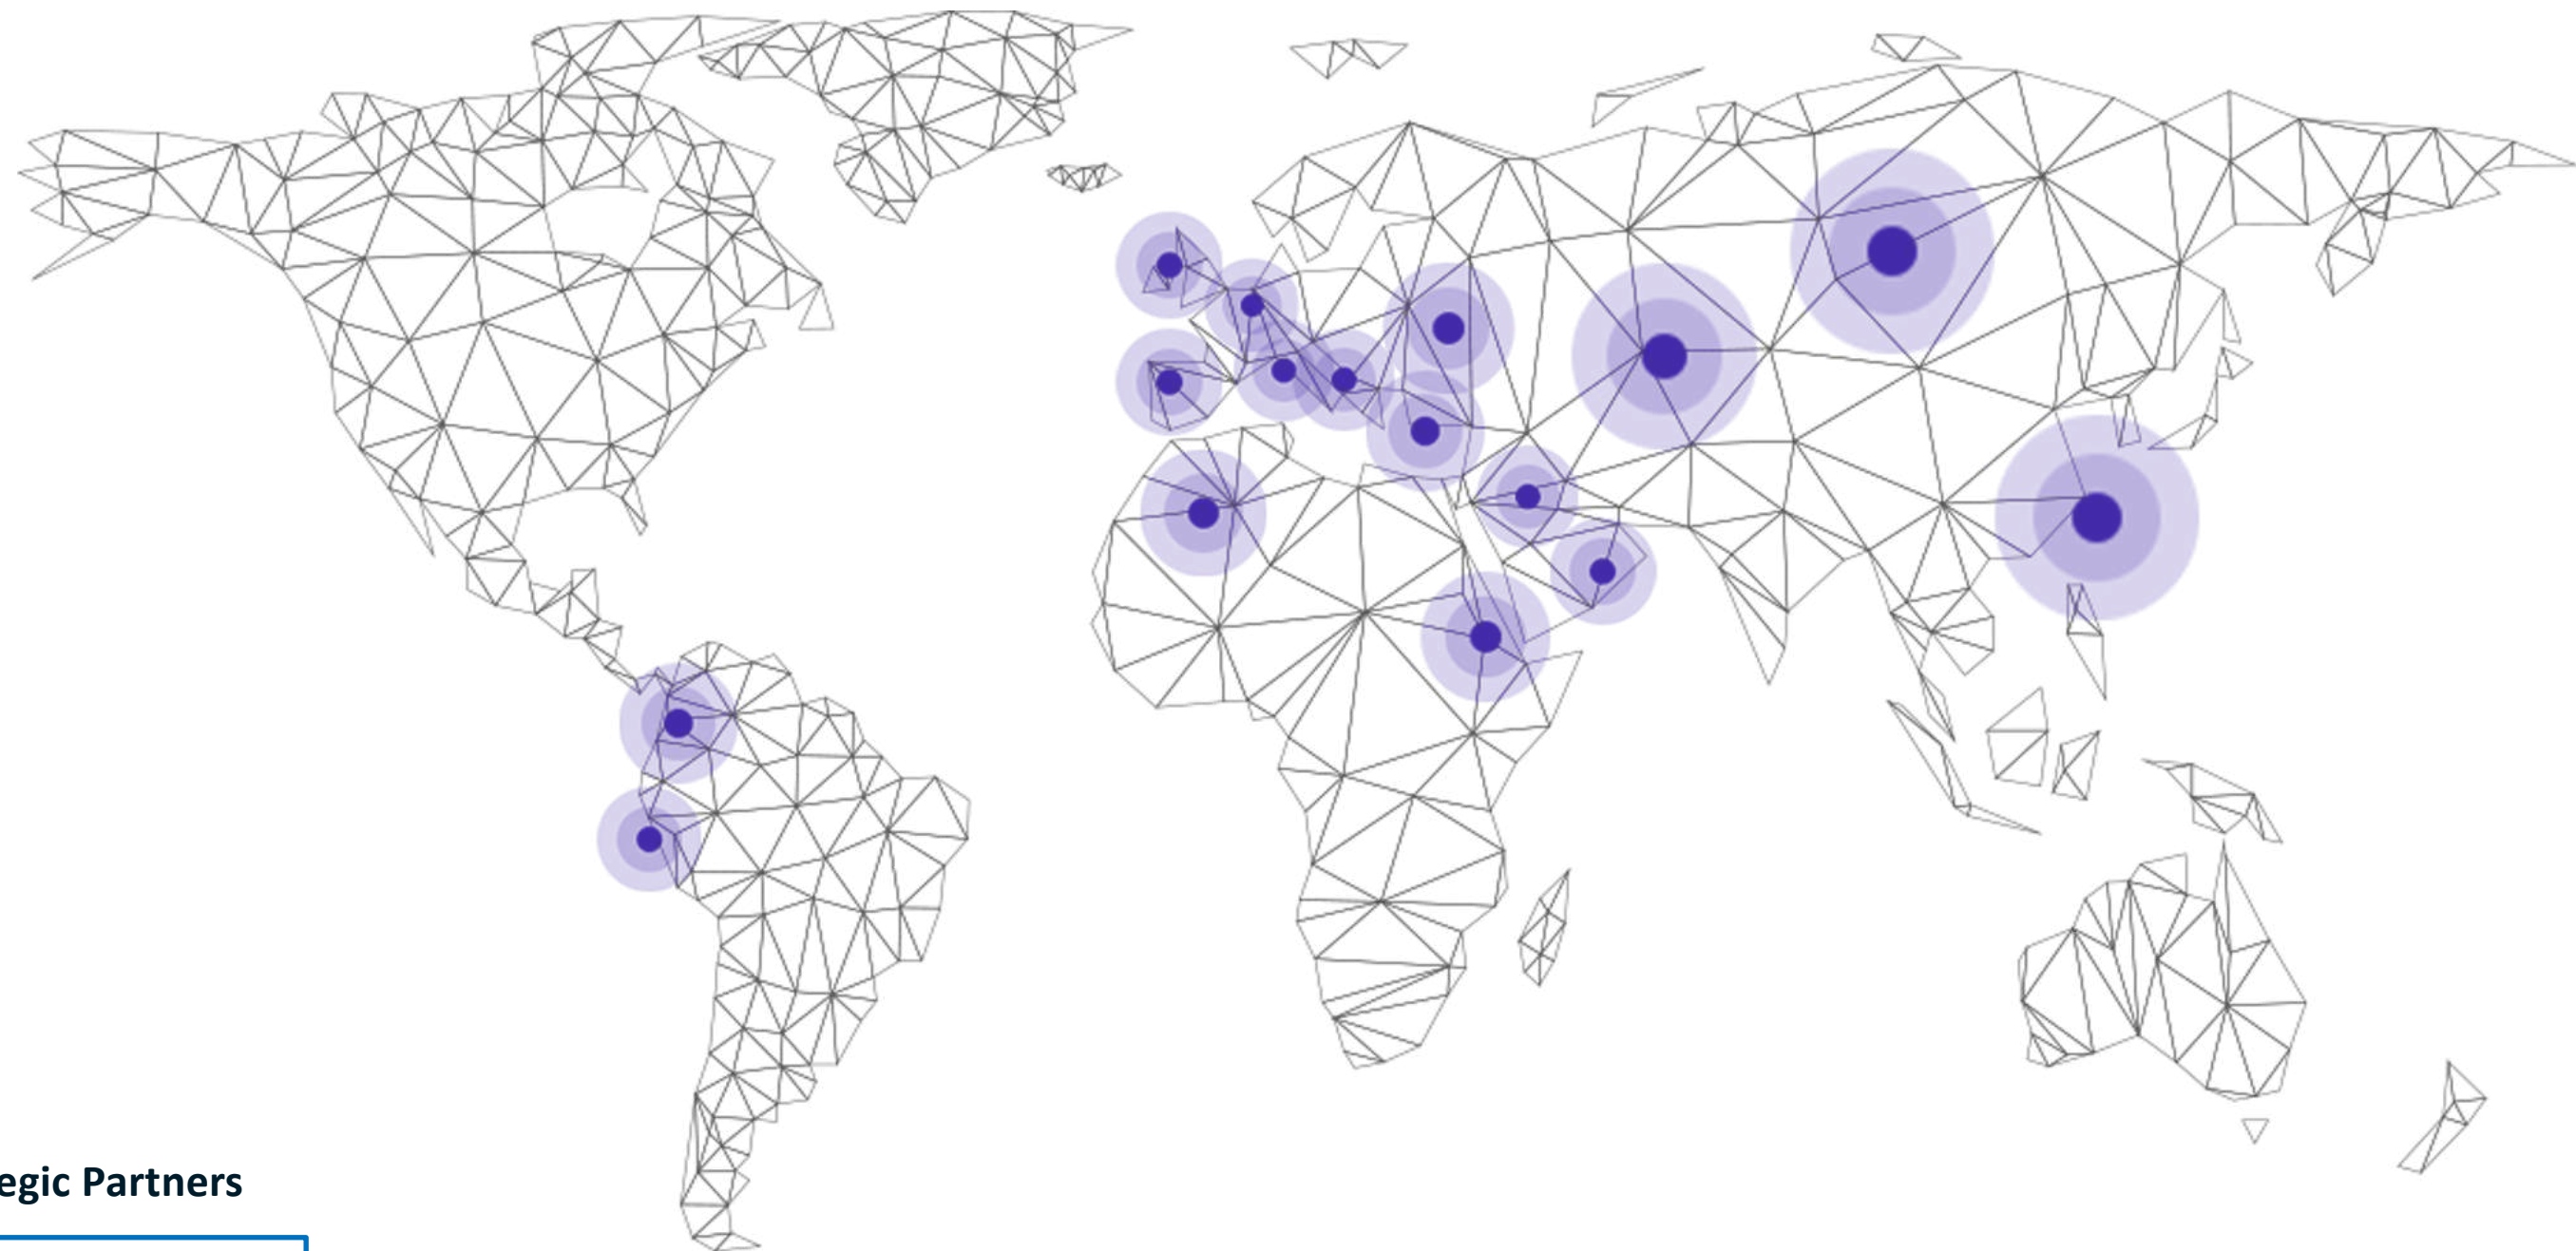

# Wide range of Software Modules & Analytical Capabilities

# Faradai's Global Client Reach

42

Countries

19.500

Facilities Under Management

8M

Real Time Data Stream

25

Megatons CO2 Footprint Reduction

## Strategic Partners

## Clients

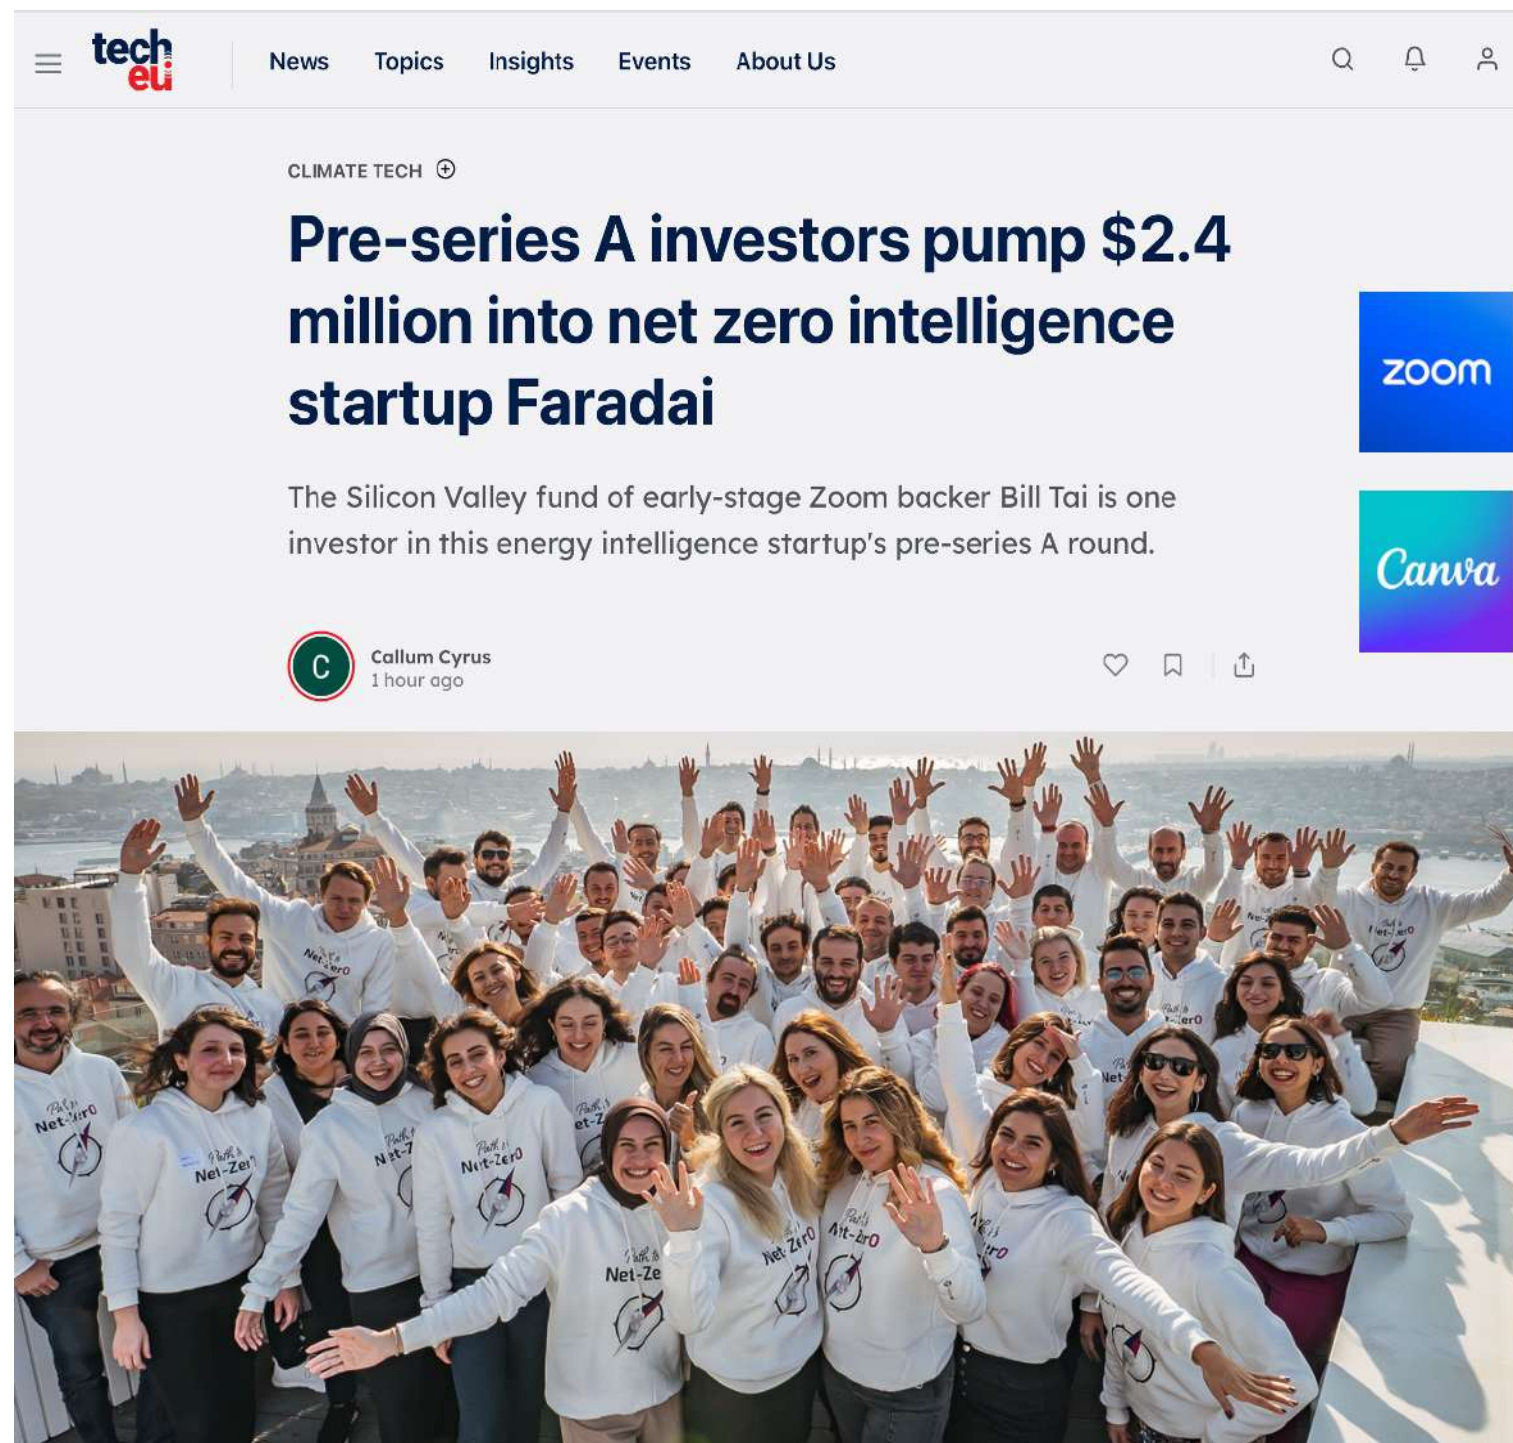

Cross Industry Solution with

150+ Global Clients

# Scaling with R&D

In Pre-Series A Round in **Q3 2022**, **\$2.4M** raised from Silicon Valley, London, Switzerland, Dubai and Singapore based investors

- Globalization perspective
- Deeptech verification for investors
- Risk mitigation for investors
- Corporate-start up collaboration & best practices
- Commercialization perspective
- Project management culture
- Product roadmap planning
- Impact oriented thinking

Social Impact on Energy Efficiency by Gamification based IoT Platform

The aim of Game4SEEN Project is to develop an innovative ICT platform adopting customized gamification techniques for increased citizen engagement in order to achieve the behavioural change of individuals on energy usage.

## Smart Algorithms and User Interaction for Residential and Commercial Solar Prosumers

The goal of the SolarPact project is developing and demonstrating advanced algorithms and software applications for solar prosumers, smart scheduling of local production and consumption via algorithms and user interaction for both the commercial and residential sectors.

## Development of Low-Carbon Residential Microgrid with Advanced Energy Exchange and Payment Capabilities

EnergyShared project aims to develop renewable energy solution based smart infrastructure by placing individuals in the core of this smart infrastructure, from energy production to storage, efficient energy use to selling, energy demand management to sharing, and monitoring to control.

EnergyShared brings together the following tools:

- Mobile Software Development Kit (SDK)
- Smart Box for houses
- Predictive Energy Management tools for microgrids
- Distributed Management System for utilities
- IoT System

**TECHNOLOGY ROADMAP**

(ANNEX to the MAP)

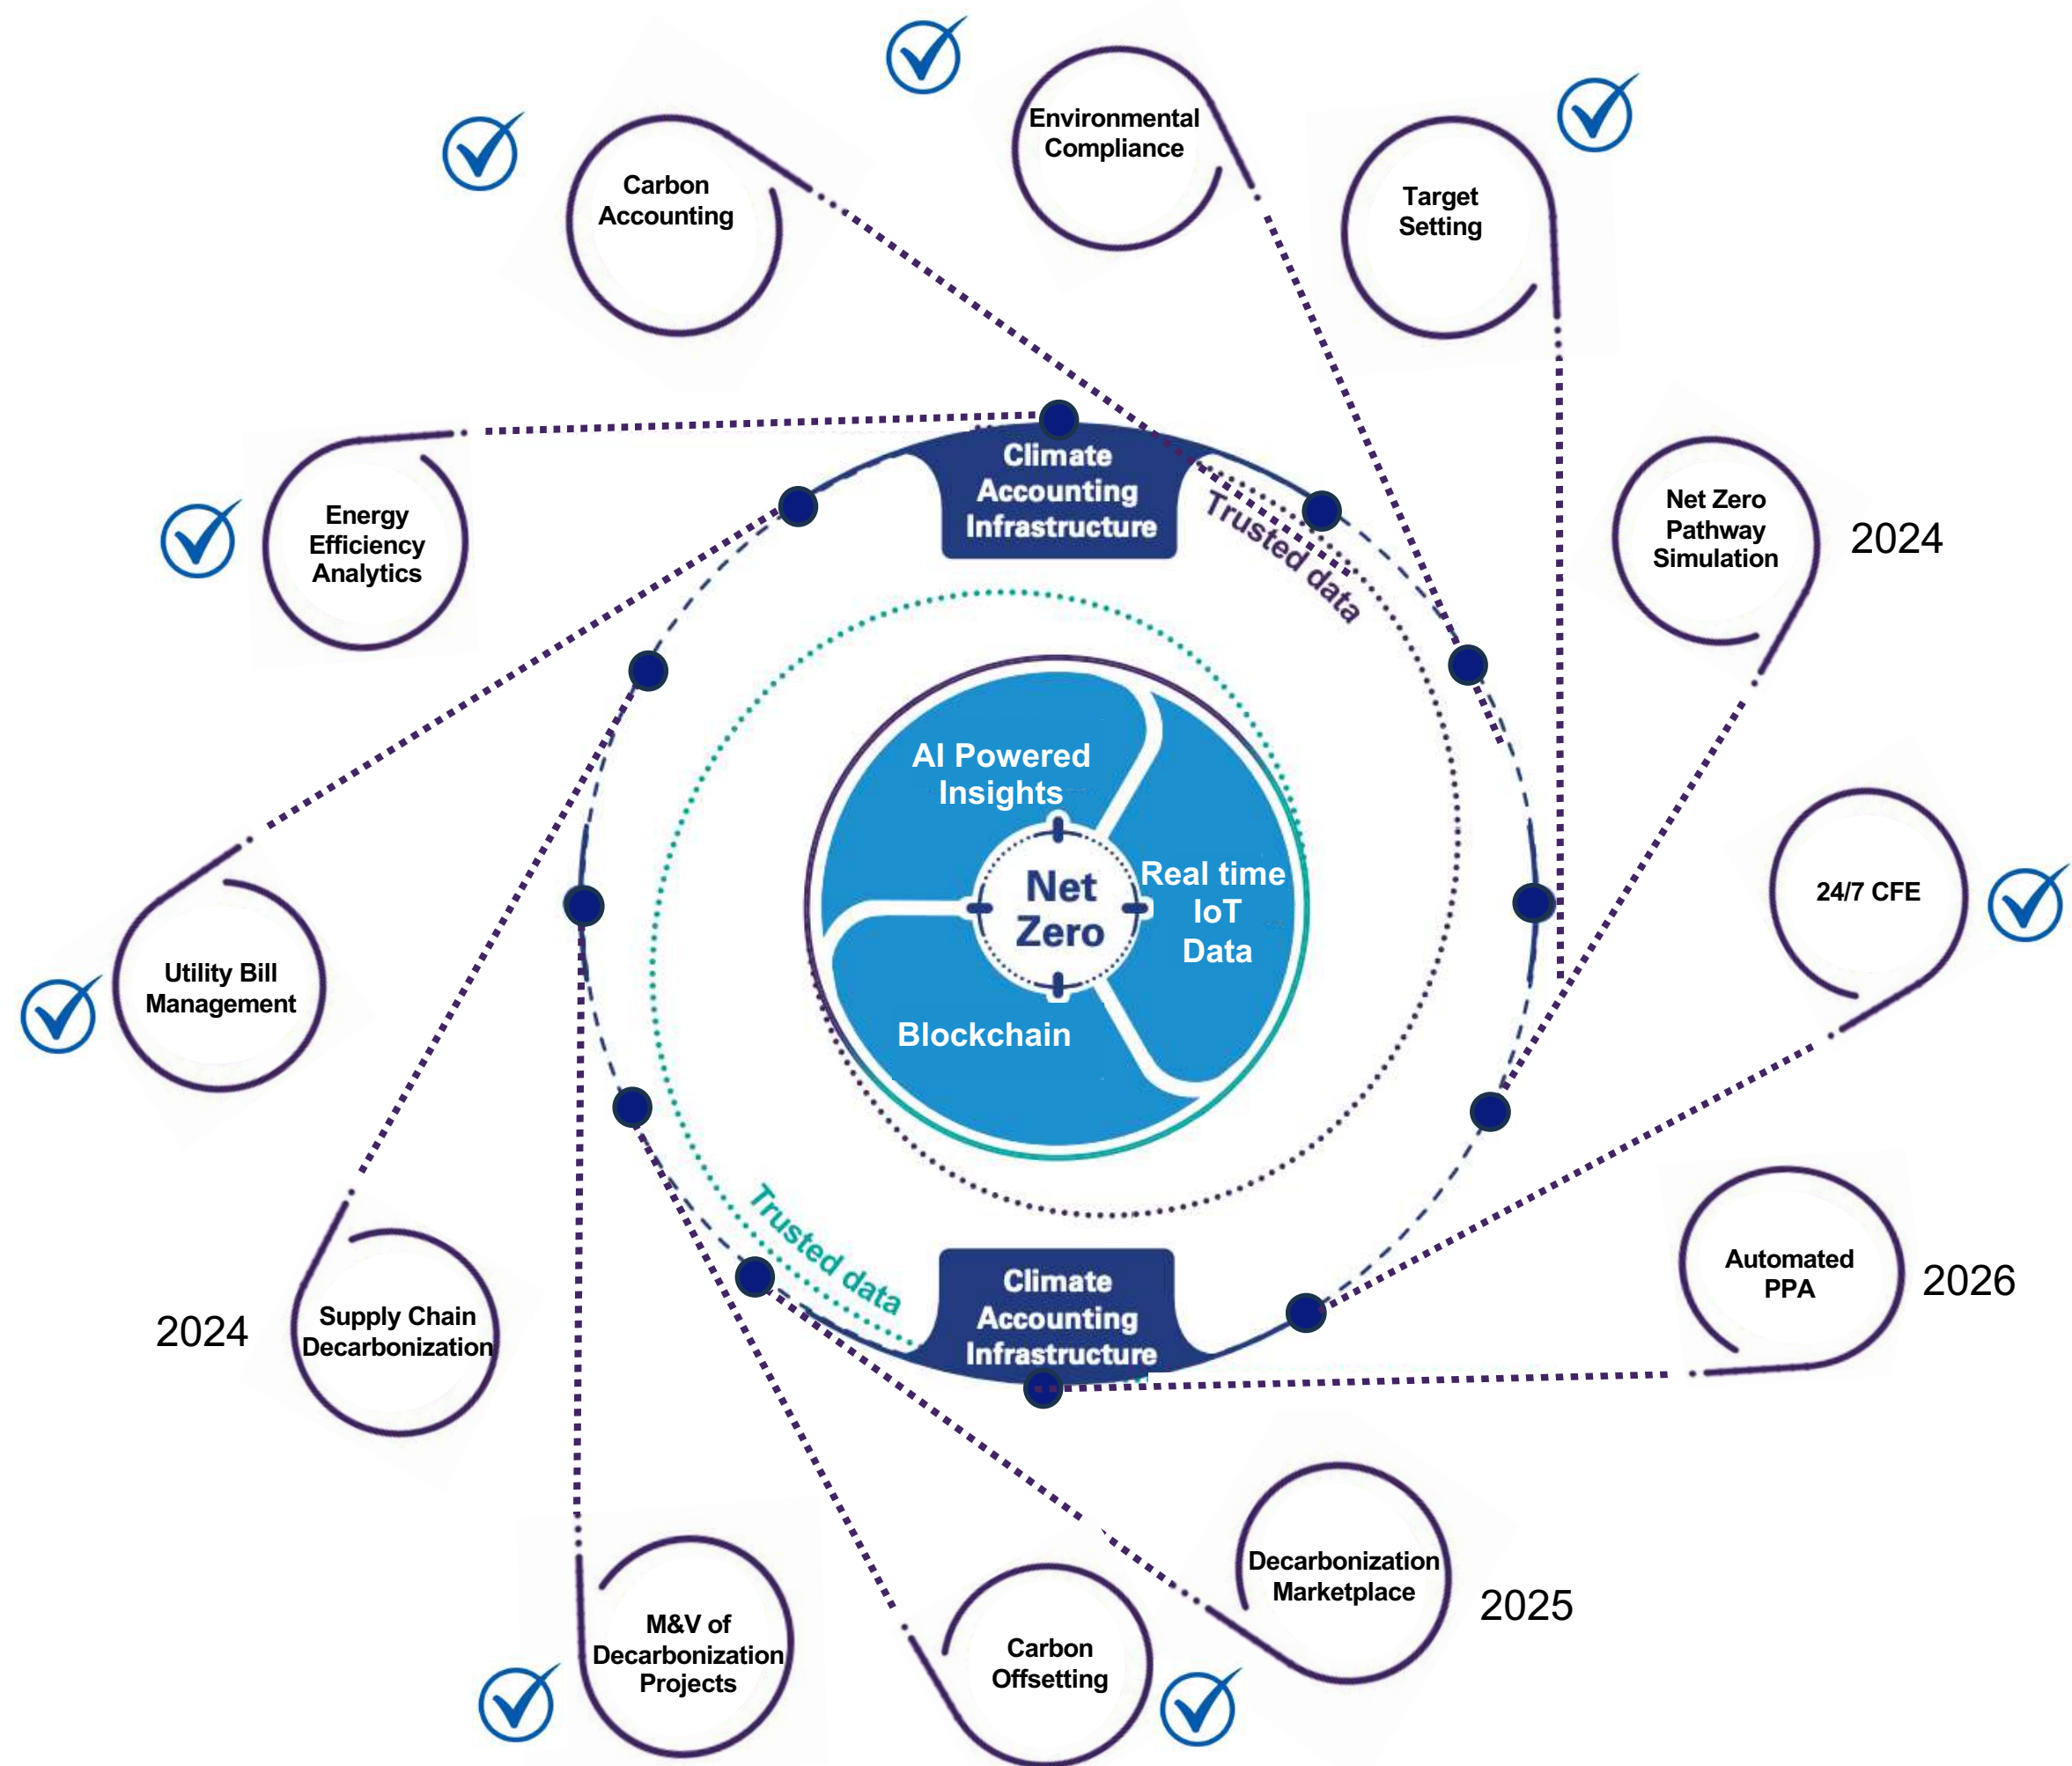

# Faradai Net Zero Intelligence Platform – R&D Roadmap

Future of Enterprise  
Decarbonization

Leveraging

- Network Effect
- Real Time Granular Data
- AI Supercharge
- Blockchain Powered Trust
- End-to-End Integrated Lean Approach

To mitigate the investors risks, the R&D efforts to develop the existing functionalities further and to initiate new modules, £5M non-dilutive R&D grants from Eurogia 2030, Innovate UK, Horizon 2030, TUBITAK (Turkey) and EnterpriseSG(Singapore) will be secured in the following 3 years.

Between 2017-2023, £2M non dilutive R&D Grants were secured successfully.

# AI Powered Net Zero Co-Pilot
