About Healthy Air Technology Ltd (HATL)

Revolutionising indoor air quality

- At the **forefront** of air purification technology, enhancing health and sustainability. Reduce infection rate by 50%, and sick leave by 35%.
- **Innovative DNO Technology:** Leading scientists in Oxford University and engineers developed the groundbreaking DNO catalyst technology.
- **Sustainable and Efficient:** Utilising advanced methods to reduce environmental impact, focusing on energy-efficient solutions in room and buildings.
- **Expanding the Horizon:** Broadening the range of air purification applications to create safer indoor environments.
- **Recognised globally:** The Red Dot Design Award product, listed by Singapore's government for combating COVID-19, and endorsed by Team GB, Mars, Private Eyes, and UK Councils.

Why HATL?

Advanced Air Purifiers: Leading with the HA500 and HA800, powered by Patented unique DNO technology.

Comprehensive Solutions: From residential to commercial, offering versatile, high-efficiency air purification.

Sustainability at Core: Energy-saving features integrated with IoT and AI for smarter, eco-friendly and energy saving operations.

Expert Team: Multi-disciplinary expertise from engineering to environmental science ensures top-tier innovation and market access.

We seek strategic partnerships

We are seeking collaborations with Chinese firms in healthcare, environmental, and sustainability sectors to innovate and integrate air purification solutions.

Join our mission

Embrace the opportunity to transform indoor air quality and contribute to global health and net-zero goals.

Let's collaborate to make a difference in air quality and health.
